

Residential handles

Premium range

ASSA ABLOY

We have made the finest selection of handles for interior designs. A renewed strength and simplicity in the design of doors that makes them immediately recognizable. A good design requires an excellent knowledge of the raw materials and its application to the last detail. The selected raw materials are:

» The Stainless Steel AISI 304 is an austenitic steel (18% chromium, 8% nickel) that offers an excellent corrosion resistance, even in the harsh environment of exterior installations. Is practically unalterable with the suitable treatment.

It far exceeds the maximum grade of the corrosion resistance standard UNE-EN 1670. It has excellent resistance to chemical attacks and in addition is unalterable to ultraviolet.

» Zamak-5 (UNE 37302 1 a R and DIN 1743-1) is a zinc alloy (4% aluminum, 1% copper, 0.05% magnesium, 94.95% zinc). Applying the right processes to this zinc alloy it turns into the unique material capable of creating complex designs.

It is a hard, highly durable & injectable material, very well suited for applications with high friction levels.

Rosette handles

The package with a rosette includes

» A set of handles with a back and cover plate, a 8x100 mm spindle, 2 recoil springs, 4 coach screws, 2 through bolts, 2 bolts and an Allen key.
