Check-In PIN

The ideal solution for hotels without a 24/7 front desk

Autonomous guest access
Maximum efficiency for the hotel

TESA Hotel's Check-In PIN solution allows guests to access their room at any time without requiring front desk staff. It is the ideal solution for small hotels or tourist apartments that, due to cost or operational constraints, do not offer a 24/7 reception service.

The guest automatically receives a temporary PIN linked to their reservation. No apps, no cards, and no staff intervention required.

Optimize your resources with Check-In PIN

Key features

PIN as a Smart Credential
Guests receive a PIN before arrival, enabling credential-free, automatic, and hassle-free access.

Allow your guests to arrive 24 hours a day, 7 days a week, access their rooms securely, and enjoy a simple digital experience. At the same time, your property can reduce operating costs, eliminate plastic card waste, and automate access management.

Access management for staff is also automated, allowing PIN permissions to be modified remotely without physical intervention or on-site visits.

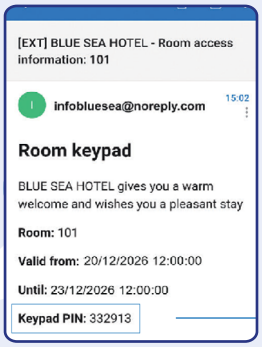

New access rights (parking, gym, etc.) can be granted, stays extended, late check-outs managed, and more through PIN access—without the need for guests to visit the reception desk.
All of this can be done remotely.

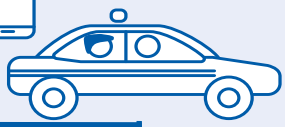

Seamlessly integrates with PMS and booking platforms.

How does it work?

Alex Cruzado wakes up at 6:00 a.m. in Madrid to catch a flight. A full day of meetings awaits him in Barcelona.

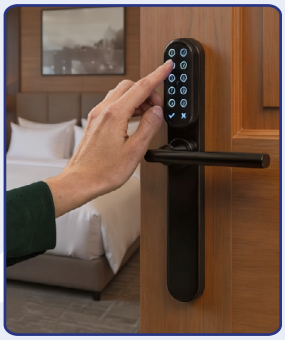

While taking a taxi to the airport, he checks his emails and finds one from the hotel containing his room PIN. One less thing to worry about.

After a long day of work and meetings, Alex heads to the hotel.

Without stopping at reception, where some tourists are waiting in line, he goes straight to his room.

He takes out his phone, checks the PIN, and enters it at the door with complete peace of mind. His access is automatically recorded by the system.

Alex's PIN code automatically expires upon check-out.

The PIN Is now a full credential

- **Up to 512 PINs** (guests + master users using PINs)
- **The PIN is now a credential** for both guests and hotel staff, with all associated features:

*** PIN activation and expiration date/time settings**
*** Permissions can be modified remotely**
*** Door access rights assigned to the PIN can be changed remotely**
*** Override privacy (Yes/No):** PIN users can be granted access even when the room's internal privacy mode ("Do Not Disturb") is activated.
*** ADA user (Yes/No):** Each PIN credential can be configured for users with accessibility requirements. The lock automatically provides double the standard opening time, ensuring a more comfortable and accessible user experience.*
*** Built-in time schedules:** Each PIN can be configured with specific valid access periods, ensuring users can only enter during authorized time slots.
*** Passage mode activation:** Particularly useful for hotel staff, this feature allows doors to remain temporarily unlocked, enabling continuous traffic without requiring any credential, whether physical or PIN-based.
*** Override blocked doors (Yes/No):** Authorized PIN users can unlock doors even when the lock is in blocking mode, according to predefined permissions.
*** Direct elevator access** to the guest's floor using only the PIN code.
*** Configurable PIN length** from 4 to 6 digits.
