

Security locks

TESA

ASSA ABLOY

The future generation of security locks

With the launch of the [TLP](#) range of multipoint locks for levers, [TESA ASSA ABLOY](#) created in the 80's the template for future security locks. Since then, there have been multiple innovations such as antisaw locking bolts, corner piece locks, antidrill escutcheons, improving what already was one of

the most complete ranges in the European security market.

But things have changed and now it's time to take another quantum leap towards big-time security with the [PLUS](#) and [PREMIUM](#) ranges.

Big time security

TESA ASSA ABLOY locks provide unparalleled security levels in the market, as well as a new design of the patented anticard latch, independent locking points, hooks operating in two protection shafts in order to avoid leverage, leverage-resistance up to 1,000 kg, assembled steel boxes that protect the strike, antidrill escutcheons, revolving key protection devices...

Innovation

Our advance I+D department is making a continuous effort to provide the market with new and better solutions that meet the increasingly demanding needs of the market. TESA ASSA ABLOY manufactures all its products with first-quality materials such as stainless steel, the standard material for fronts and strikes.

Guaranteed by TESA ASSA ABLOY

Buying TESA ASSA ABLOY is a quality guarantee. All our products bear the highest quality warrants: the ISO 9001 Quality certificate, the environmentally conscious ISO 14001 standard, and the Occupational Hazard Prevention standard. TESA ASSA ABLOY offers an environmentally sustainable quality product, manufactured by dedicated staff.

Finishes

Great diversity in finishes. Finishes in PVD, CM, STAINLESS, providing the trims with unusual hardness and high anticorrosion resistance, guaranteed by TESA ASSA ABLOY. Diversity in finishes: chrome, paint, nickel, brass, satin...

Integral locking solution

One lock for each need, single-point and multipoint locks, various backsets and distances between shafts, various embellishments and escutcheons, finishes, packagings, customizations.

TESA ASSA ABLOY concept for global security

High and low locking points in carbonitrided steel. Carbonitride is a surface treatment that provides extraordinary hardness.

RB03 hinge reinforcements: antisaw and antilever protection

Auxiliary locking points reinforced with a patented no-return system.

Central case with a reinforced device. Optional follower rod and steel latch for RF doors. Also available: PANIC exit device in TLBA, R20AB and TCBA series.

Security escutcheon, anti-extraction and antidrill protection. Tempered steel protection plate in the E700 escutcheon. Tempering provides the inner structure of the material with high antidrill hardness.

Floor strike with antidust protection.

Security

XT Premium Series

The new XT Premium brings the market first class security in wooden doors - it's a new concept encompassing several innovative devices that improve to a great extent the security in the entrance door.

According to the figures provided by ASSA ABLOY's Security Point, the most frequent method used by thieves is inserting a plastic card. They take advantage of the fact that many users don't lock their houses when they leave their homes for limited periods of time. TESA ASSA ABLOY has tackled this issue by including the ANTICARD LATCH in the XT PREMIUM. This innovative latch features a no-return system in order to prevent the latch from being removed by tampering with it.

- » A new device with an **independent blocking in every locking point**: if one of the locking points is broken, the rest will remain unaltered, keeping the door blocked.
- » Leverage resistance in the upper central lock **above 1,000 kg**.
- » New auxiliary hooks made of solid steel and anchoring in closed steel boxes in the strike. Great leverage resistance between the leaf and the frame. More than 600 kg in each hook.
- » **New high security E900 escutcheon**. The protection of the cylinder and the devices makes it virtually invincible.
- » As for the installation, it's just as simple as the standard TLB, because you can use those mechanizings of the door made for any multipoint, and with the new XT PREMIUM series, the multipoint locks can be re-stocked, either from TESA ASSA ABLOY or from most brands in the market.

Escutcheon E900 included

Technical features:

- » Blocking system with independent locking points.
- » Anticard latch.
- » Four bolts in the central case and solid steel hooks.
- » Front and strike both made of steel.
- » Distance between shafts: 85 mm.
- » Backset: 50 mm.
- » XT3 and XT5 models present three and five frontal points.
- » E900 escutcheon:
 - The core and the sleeve are made of reinforced solid steel.
 - Antidrill protection in the reinforced steel cylinder with 9mm thickness.
 - Anticard balls for the protection of the cylinder.
 - Fixing: four screws made of tempered steel.
- » Long strike with a protection central case and adjustable latch, plus closed protection cases for the hook locks. Widths: 40 mm (standard) and 45 mm (optional).
- » Closed cases, galvanized steel.

Multipoint security

Security

A

TAB autodeadbolt Series

- » Auxiliary lock are automatically projected. When the door is closed, all the time 3 points working, the latch bolt and two auxiliary locks.
- » From the interior side, when the handle is activated, two auxiliary locks and the latch bolt are withdraw. From the exterior part, the cylinder is used for the same function.
- » Form more security the 4 central rollers bolts can be activated with the cylinder and they are completely independent, and they ant saw rotation movement.

SECURITY AGAINST INTRUDERS

- » When the door is closed, hooks are automatically activated, to hamper the intrusion.
- » Is compatible with other TESA ASSA ABLOY products. Door protection is complete when cylinder and escutcheon are mounted.
- » Is accurate for new doors or to replacement doors. (Compatible with TLB3, T2B3)

Technical features:

- » 4 roller bolts in the central point. Roller bolts have and anti-saw rotational system. 14mm diameter and nickel plated.
- » Automatically activated auxiliary 2 locks. Constantly 3 points activated, 2 auxiliary locks and latch bolt.
- » All the locking points are independent.
- » Central locking point is activated manually with the cylinder.
- » Backset 50, 60 mm.
- » Distance between axis: 85mm.
- » Finishes: AC,AE. Stainless Steel.
- » E700 Escutcheon.
- » High security double clutch T60 cylinder.
- » Steel material base in front plate and strike.
- » Strike wide: 40,45 mm.

Includes E700 escutcheon

Multipoint security

Security

TMB motorized multipoint lock

- » Automatic locking of the high and low points by anti-lever hooks: the door remains protected by the high and low points and also by the latch.
- » The door is opened from the inside by the handle, from the outside by the mechanical key or an electric signal (dual key, proximity card, remote control, etc.), depending on each specific credential (the latch and the high and low points are automatically removed).
- » The middle point, with four anti-saw bolts, can be key-locked as an additional security measure. The key-locking of the middle bolts prevents any openings by remote control (service function).
- » In case of a power cut, there is always the chance of mechanically opening/blocking the lock with the cylinder.

Anti-intrusion security

- » When the door is locked, the hooks remain blocked, which prevents it from being leveraged.
- » Compatible with other TESA ASSA ABLOY products: a cylinder and a suitable security escutcheon complement the door's protection.
- » Apt for both new doors and replacements.

Technical features

- » Central bolt lock. Four anti-saw bolts in nickel-plated steel, diameter: 14mm.
- » Automatic auxiliary locks for hooks. Three locking points active at all times.
- » Independent locking points.
- » A manual cylinder activates the bolts on the central lock.
- » Inlets: 50 and 60 mm.
- » Distance between shafts: 85 mm.
- » Finishes: AE, AC, Inox (Stainless).
- » E700 escutcheon with anti-drill plate.
- » T60 DS high security cylinder. Double clutch.
- » Basic raw material for the front and strike: steel.
- » Long strike: 40, 45 mm.
- » Power supply: 12V DC
- » Maximum consumption: 550 mA

Self-programmable wall reader

The reader activates the locking element with a relay: electric strike, electromagnetic/motorized lock, etc. It requires an external power supply of 12Vac/Vdc.

Connectors	Description
CN1	Power supply 12Vac / Vdc
CN2	Consumption at rest 80 µA Consumption with the relay operating 150 mA
CN3	Relay outlet: NO, NC and C. Cut capacity: 5A 250 VAC / 5A 30Vdc
CLR	Reset button for erasing the reader's memory
Operation conditions	Description
Humidity	Up to 85% without condensation
Temperature	-10° - 80°C

Noise coming from the electric strike: we recommend the user to have VARIS-TOR (included) installed on the electric strike in order to absorb the noises made by the strike. Alternate current only.

Reference	Description
STAR2DSSI	Self-programmable design reader

RFID Combi Key

With TESA ASSA ABLOY's RFID COMBI key, the user will be able to fit together TESA ASSA ABLOY's mechanical masterkeyings with self-programmable locks or other single-credential proximity access control systems.

TESA ASSA ABLOY's COMBI key will be able to open mechanical cylinders of the T80 system and the TX80 and TK100 patented systems, and also get access by placing it near a wall reader or a MIFARE proximity technology electronic lock.

Carved key		Uncut key

Multipoint security

TPB Series

High security multipoint rollerbolt lock that adds convenience to high security. The roller bolts are projected lifting up the handle, with no need to use the key. When we want to leave, turning down the handle will be enough to activate the antipanic system and unlock the door.

- » 3 points multipoint lock.
- » Auxiliary lock: 14 mm diameter steel made rollerbolts.
- » Central lock: 14 mm diameter steel made rollerbolts.
- » Anticard security latch.
- » Faceplate 10 x 20 mm.
- » Backset: 60 mm.
- » The roller bolts are projected lifting up the handle.
- » Turning down the handle bolts and latchbolt are withdrawn.

CANB “Z” profile Series

- » Z-profile faceplate that completely covers the door edge, thus easing the lock installation and reaching higher levels of aesthetic appearance.
- » Circular roller bolts in the main lock. (ø14mm. diameter).
- » Anodised aluminium faceplate in polished gold finish.
- » Rubber weather strip that assures a hermetic shutting and eliminates noise.
- » E700L security escutcheon included.
- » The EMB700 scratch-saver escutcheon rose is included.
- » Mechanisms protected in galvanised steel closed cases.
- » Auxiliary locks mechanisms provided with anti-return system.
- » 50mm. standard backset, 60mm. backset is also available.
- » Three or five frontal locking points, for both right or left handed doors, and for 40mm. or 45mm. door width.
- » Faceplate is 2030mm. long and can optionally be made in 2.110mm.
- » Full size strike plates of 40mm. or 45mm. width. Standard height is 2.028mm. Optionally, 2035mm. height is also available.
- » Also available full size, single-hole strike plates for CANB3 models. (One single hole for each group of roller bolts, see page 16/SE).
- » Enamelled in AE/AC

Single point mortise locks

R200N - R201N Series

- » Saw-resistant deadbolt reinforced with tempered steel plates and hardened steel security hook.
- » Deadbolt throw: 20mm.
- » Mechanisms protected in zinc plated steel closed case.
- » R201N has open case that includes top and bottom protective lids.
- » E700L security escutcheon. Anti-drill and anti-extraction attack.
- » Solid brass faceplate and brass plated strike plate.
- » Also available with nickel plated faceplate, strike plate and security escutcheon.
- » Locks with rounded edge faceplate and strike plates are also available.
- » New finish: Stainless steel (AI)
- » Anticard latchbolt available (R200N)

Panic mortise locks

TESA ASSA ABLOY panic locks resolve the two main problems that we face in an entrance door: material goods protection and the security of the public.

Whenever a panic situation might arise, the panic function will always allow free exit from the inside of the dwelling, even though the bolts have been deadlocked.

Single point rim locks

Rim locks

TESA ASSA ABLOY rim locks are the ideal complement to improve the security grade of any door.

Functions

- » 2101 & 2110: Thumbturn inside, key outside.
- » 2111: Key at both sides.

Features

- » Nickel plated steel deadbolt.
- » Reinforced steel strike case prevents crowbar attack.
- » Mechanism is protected inside a closed steel case.
- » Anti-Drill and anti-extraction attack ESTS security escutcheon is standard equipment in all models with security cylinders.
- » ESTS escutcheon finish is satin nickel.
- » Standard rim cylinder fits door widths up to 48mm.
- » Adjustable length rim cylinder models possess an indented connecting bar that can be easily cut to the desired length and reaching up to 80mm. door width.
- » 2101 model is equipped with TE-5 cylinder.
- » The rest of the models can be ordered with TE5, T60, T80 and TX80 rim cylinders.
- » Finish can be chosen between gold or light grey enamelled steel.

Security escutcheons for mortise locks

E900

Security

- » Escutcheon core: Completely reinforced solid steel Anti-drill ball inlays in points susceptible to drilling.
- » 6 anti-drill balls 9 mm thick tempered steel tube protector formed by microfusion to prevent drilling
- » Solid stainless steel rotating bushing, with anti-jamming function
- » Double rotating bushing to increase security.
- » Fastening by means of four tempered steel screws (2 M6, 2 M5).
- » Inner counterplate in 4mm thick steel.
- » Adjustable escutcheon with thread to adjust to different door thicknesses.
- » Escutcheon body does not protrude from the bushing, to facilitate door machining and to be able to install on metal doors TESA and DIN type housings (38 mm between axes).
- » Compatible with Europrofile and Swiss Profile cylinders
- » Finishes Al (Stainless), LPD (Gold PVD treatment), NE (Black paint).
- » Options Laser customization.

E700

Security

- » Escutcheon nucleus: Four stamped steel plates (2mm. each plate).
- » Plug covering lid in hardened steel.
- » Tempered steel plate for lock mechanism protection.
- » Six hardened steel screws for escutcheon fixing.
- » Laminated steel back fixing plate has 4mm. width.
- » The E700X special model will be required for use in combination with STS security cylinders: IX and CS systems.
- » Finishes: Satin brass and nickel plated brass.

E700L

Security

**

- » Escutcheon nucleus: Two stamped steel plates (2mm. each plate).
- » Plug covering lid in hardened steel.
- » Two hardened steel screws for escutcheon fixing.
- » Laminated steel back fixing plate has 4mm. width.
- » Finishes: Satin brass and nickel plated brass.

Security escutcheons for mortise locks

E300L

- » Anti-extraction solid brass exterior escutcheon.
- » Two hardened steel screws for escutcheon fixing.
- » Laminated steel back fixing plate has 4mm. width.
- » Finishes: Satin brass and nickel plated brass.
- » Very easy installation.

Full size strike plates

Roller bolts

The strike holes for each roller bolt has a vertical play of 5,4mm. to prevent interference due to possible door dropping. Strikes with a single hole for each set of roller bolts are also available optionally. (CB3NC).

The full size strike plates with adjustable latch strike ease the latch horizontal fitting adjustment. These strikes also possess a closed steel striking box for the main lock, which provides a greater security level, as they prevent crowbar attack.

Detail of the latch horizontal adjustment and the closed box strike.
